Jeng-Yue (Buffett) Liu

(412) 284-3635 | buffettl@andrew.cmu.edu | buffett0323-github-io.vercel.app | linkedin.com/in/buffettliu

Education

Carnegie Mellon University — Pittsburgh, PA
Master of Science in Artificial Intelligence and Innovation — May 2027
- Relevant Courses: Introduction to Computer Systems, Introduction to Machine Learning, Generative AI for Music and Audio.

National Taiwan University — Taipei, Taiwan
Bachelor of Business Administration in Information Management — Jun 2025
Bachelor of Science in Geography
- Awards: Phi Tau Phi (**top 1%** of the school), Bachelor Degree Thesis Award, Presidential Award, Dean's List (2x).

Skills

Languages: Python, C, C++, Java, JavaScript, TypeScript, R, SQL, Shell
Frameworks: PyTorch, TensorFlow, Scikit-learn, Hugging Face, LangChain, React, Next.js, FastAPI, Flask
Tools: Docker, Kubernetes, Helm, PostgreSQL, Apache Spark, Airflow, Argo CD, GitHub Actions, Postman, Linux

Work Experience

Academia Sinica, Music and Audio Computing Lab — Taipei, Taiwan
Research Assistant (Advised by Prof. Yi-Hsuan Yang & Prof. Li Su) — Jan 2024 – Aug 2025
- Outperformed state-of-the-art models with a 47.3% reduction in multi-scale STFT loss, enabling controllable timbre–content–ADSR disentanglement in style transfer, by proposing the factorized codec with attribute-specific auxiliary task and information perturbation.
- Achieved 86% k-NN top-1 similarity across 75k+ Beatport segments by designing a zero-shot timbre encoder with SimSiam and Swin Transformer, leveraging sequence perturbation and temporal augmentations for timbre-invariant representation learning.
- Boosted instrument-specific SNR by 7% in audio-query music source separation system by developing a band-split Mamba2 with a hypernetwork that generates weights for conditioning control to improve timbre conditioning.

Quid Inc. — Taipei, Taiwan
Machine Learning Engineer Intern — Dec 2024 – Jun 2025
- Reduced manual prompt tuning by 10+ hours per week by optimizing search result similarity ranking and match scoring with DSPy under Chain-of-Thought and MIPROv2, and automating summary and title generation through an LLM-based assessment module.
- Advanced TikTok emerging hashtag capture accuracy by 18% through enhancing the trend-prediction module with Bayesian online changepoint detection, enabling early identification of volatile trends for social media sentiment analysis.
- Extended internal Python testing packages to automate CI/CD testing and releases by defining CanalTask and WorkflowTemplates in Helm charts, integrating the NER lookup service with Argo Workflows.
- Minimized deployment overhead of LLM services, adopted by 160+ companies, by streamlining Kubernetes-native CI/CD workflows.

Project Experience

Music Audio Generation via Spectrogram Diffusion — Aug 2025 – Sep 2025
- Achieved a 8% FAD improvement on 2k FMA clips, by fine-tuning Stable Diffusion v1.5 with spectrogram-based audio-to-image conversion and a Mel-scale perceptual weighting codec.

Lightweight Timbre Conditioning for Controllable Music Generation — Feb 2025 – May 2025
- Enabled timbre-aware control in music generation by pre-training a zero-shot timbre encoder and extending it into a conditional module for diffusion Transformers, improving synthesis quality through lightweight decoupled cross-attention.

GraphRAG for News Analysis with LLMs — Dec 2023 – Dec 2024
- Improved glossary adherence and cut token cost by 49%, achieving >70% expert-validated alignment, by fine-tuning LLMs with a glossary-first QA pipeline that retrieved glossary chunks and constrained answers to glossary definitions.
- Eliminated 97% of manual analysis effort by engineering GraphRAG indexing and an LLM-powered full-stack app that extracted entities, distilled cross-article insights, and revealed shifts in public attitudes via temporal entity frequency analysis.
