

Jeng-Yue Liu

(412) 284-3635 | buffettl@andrew.cmu.edu | buffett0323-github-io.vercel.app | linkedin.com/in/buffettliu

EDUCATION

Carnegie Mellon University, School of Computer Science

Pittsburgh, PA

Master of Science in Artificial Intelligence and Innovation

May 2027

- Relevant Courses: Multimodal ML, AI Engineering, LLM Systems, Computer Systems, ML/DL, Gen AI for Music and Audio.

National Taiwan University

Taipei, Taiwan

Bachelor of Business Administration in Information Management

Jun 2025

- Awards: Summa Cum Laude (**top 1%** of the school), Bachelor Degree Thesis Award, Presidential Award, Dean's List (2x).

SKILLS

Languages: Python, C, C++, Java, JavaScript, TypeScript, R, SQL, Shell

Frameworks: PyTorch, NumPy, Hugging Face, LangChain, React, Next.js, FastAPI, Flask, JUCE

Tools: Docker, Kubernetes, Helm, PostgreSQL, Apache Spark, Airflow, Argo CD, GitHub Actions, Postman, Linux

WORK EXPERIENCE

Music and Audio Computing Lab, Academia Sinica

Taipei, Taiwan

Research Assistant

Jul 2024 – Aug 2025

- Outperformed state-of-the-art models with a 47.3% reduction in multi-scale STFT loss, enabling controllable timbre-content-ADSR disentanglement in style transfer, by proposing the factorized codec with attribute-specific auxiliary task and information perturbation.
- Boosted instrument-specific SNR by 7% in audio-query music source separation system by developing a band-split Mamba2 with a hypernetwork for adaptive timbre conditioning.

Quid Inc.

Taipei, Taiwan

Machine Learning Engineer Intern

Dec 2024 – Jun 2025

- Reduced manual prompt tuning by 10+ hours per week by optimizing search result similarity ranking and match scoring with DSPy under Chain-of-Thought and MIPROv2, and automating summary and title generation through an LLM-based assessment module.
- Advanced TikTok emerging hashtag capture accuracy by 18% through enhancing the trend-prediction module with temporal fusion transformer, enabling early identification of volatile trends for social media sentiment analysis.

Music and AI Lab, NTU

Taipei, Taiwan

Undergraduate Researcher

Jan 2024 – Jun 2025

- Achieved 86% k-NN top-1 similarity across 75k+ Beatport segments by designing a zero-shot timbre encoder with MoCo-v2 and Swin Transformer, leveraging sequence perturbation and temporal augmentations for timbre-invariant representation learning.

PROJECT EXPERIENCE

Composition-Level Music Copyright Detection

Oct 2025 – Present

- Designed MIDI-level augmentation algorithms (chord arpeggiation and chord inversion) to simulate copyright-plagiarism scenarios and train a segmented Triplet Network capable of capturing structural musical similarities.

AI Humorous Podcast Generation Platform (CMU Startup Competition)

Sep 2025 – Present

- Built a multi-modal podcast platform integrating Whisper ASR, OpenAI embeddings for semantic retrieval, and RAG-based AI host personas, enabling contextual narrative retrieval, story interleaving, and natural dual-host banter generation.
- Engineered a text-to-speech system with segmented parallel processing and multi-engine optimization, achieving zero-shot voice cloning, emotion-controllable multi-speaker synthesis, and a 13× real-time generation factor.

GraphRAG for News Analysis with LLMs

Dec 2023 – Dec 2024

- Improved glossary adherence and cut token cost by 49%, achieving >70% expert-validated alignment, by fine-tuning LLMs with a glossary-first QA pipeline that retrieved glossary chunks and constrained answers to glossary definitions.
- Eliminated 97% of manual analysis effort by engineering GraphRAG indexing and an LLM-powered full-stack app that extracted entities, distilled cross-article insights, and revealed shifts in public attitudes via temporal entity frequency analysis.
